

Contents

Chapter 1	Introduction	
1.1	Applicability of guideline	1
1.2	Seismic Measures for building equipment	1
Chapter 2	Seismic Force	
2.1	Seismic Force	3
2.2	Seismic Force for Equipment(1)(in case that dynamic Response analysis of the building is not performed.)	3
2.3	Seismic Force for Equipment(2)(in case that the time History response analysis of the building is performed.)	6
Chapter 3	Seismic Restraint for Equipment	
3.1	Concept of seismic restraint for equipment	9
3.2	Seismic restraint by anchor bolts(direct restraint)	10
3.3	Seismic restraint by top restraint members	10
3.4	Seismic restraint by using seismic snubbers	11
3.5	Seismic restraint using steel frame base	11
Chapter 4	Allowable Strength and Selection of Anchor Bolts	
4.1	Allowable tension force and allowable stress of anchor bolts	23
4.2	Method to select anchor bolts	24
	Commentary(4.1 and 4.2)	24
Chapter 5	Design for Housekeeping Pad of Equipment	
5.1	Transmission of overturning moment and shear force to housekeeping pad	33
5.2	Examination formula for housekeeping pad shape	39
Chapter 6	Seismic Restraint to Pippings	
6.1	Basic matters regarding seismic restraint measures for pippings	49
6.2	Seismic measures for horizontal pippings	50
6.3	Seismic restraint for vertical pippings	52
6.4	Seismic measures for pippings passing through an expansion joint of buildings	52
6.5	Seismic measures for pippings which enter building from ground	53
6.6	Seismic measures for connections between equipment and pippings	53
6.7	Equipment interacting with the ceiling members and the restraint members	53
